

## Frozen Beverage Machine:

1. Make sure all switches are in the down position in order for machine to operate properly. Keep machine in shaded area to ensure that it will freeze properly and do not run on more than 50 foot (12 gauge) extension cord.
2. Pour 2 Gallons of water into machine and start machine at least **four hours** prior to the beginning of the party. If using alcohol pour 1.5 gallons of water. This way if there is a machine malfunction you are losing water, not product.
3. Immediately after confirming that there is no leaks, pour product into machine. If using alcohol pour 1.75 liters (half gallon) into machine now as well.
4. Keep remaining containers of product as cold as possible but **DO NOT FREEZE** them. This will ensure that product freezes faster when added to the machine.

### **DO NOT USE ICE IN THIS MACHINE!**

\*\*\*If you have any further questions or there is any problem with the machine please immediately call (413) 589-7368.

\*\*When done with the machine, please empty and leave as is. We will clean it for you \*\*
